

## Xtreme ViKiNG ANPR

Building on the technology of the original ViKiNG Deployable Camera, such as GSM, GPRS and Wi-Fi connectivity, 18x zoom, integrated IR LED's and built-in storage, comes the ViKiNG ANPR.

Uniquely adaptable this really is a plug and play re-deployable ANPR camera. Simply install the mounting plate to a wall, pole or lighting column and just add power. The ViKiNG will automatically start recording number plates and overviews from this point, and can be accessed remotely via WLAN, GSM, PDA and/or a smart phone.

Coupled with the standard ANPR technology and recording including the storage of plate overview and position data this unit will check against white and black lists. This information stored locally can be either emailed immediately, on a hourly, daily, weekly or monthly basis as required and in a format of your choice, or communicated directly to your back office or collected locally in sting operations.

Tasks now complete, then why not just utilise the deployable as a standard CCTV camera with infrared or change its role from the day time ANPR to night time support of public disorder or pub watch or visa versa, the choice is yours the flexibility is endless.

Local connection within 100m of the camera. Monitor in real time using Wi-Fi.

GSM/GPRS/HSUPA communications via SIM card. Monitor camera images and ANPR data from anywhere in the world.

**Any internet enabled workstation with access rights can connect to the camera to view live or recorded footage and ANPR data.**

Up to three additional cameras can be added including RS485 telemetry (if required). Ideal for adding a further three lanes of ANPR to the one unit or a further lane plus overview.
